

Teleworking Tools

Effective teleworking - whether working from home, a coffee shop, a hotel, or anywhere else outside of the office - requires reliable tools for making and taking calls using business phone numbers.

The smartphone and computer apps available with our Internet Phone System are the perfect fit.

PC and Mac

Available for Microsoft® Windows (7, 8, 10)
and Apple OS X® (10.7+)

Smartphone and Tablet

Available for Apple iOS (10.0+)
and Android™ (5.0+)

- **Protect Business Identity** – answer incoming business calls anytime, anywhere, and make outbound calls showing your business Caller ID
- **Maintain Professional Image** - Incoming business calls you miss go to your business voicemail, not personal voicemail
- **Presence View** – see real-time status of teammates whether on the phone, in a meeting, or away (Outlook)
- **Visual Voicemail** and **Call History** features sync with your desk phone
- **Chat (Instant Message)** with other virtual phone users on your team
- **SMS/Text Messaging** with your customers and employees (*Optional Add-on*)
- **Unique ringtones** for business mobility calls vs. personal cellular calls (*Smartphone App Only*)
- **Click-to-Dial** mode when paired with a desk phone
- Sync contacts with Microsoft Outlook or Mac Address Book (*Desktop Only*)
- Optional sync to Salesforce®, SugarCRM® and other CRM databases (*Desktop Only*)

Calls made with the softphone app use data, not cellular minutes. Call quality while using any real-time voice application like Skype, FaceTime® or POPP's MaX UC is only as good as the internet connection your device is using. A weak cellular data/WiFi signal or congested internet will result in poor call quality or missed calls.
