Previous iOS Release – July 8, 2024 V3.21.00 SU17

	Summary	Description
1.	On MaX UC on iOS, attempting a Click To Dial call when the calling option 'Ask before every call' is set, the app will crash.	Click To Dial causes app to crash.

Previous iOS Release – March 25, 2024 V3.21

	Summary of Updates in this Release	
1.	- Display incoming international numbers properly for caller ID - Support for distinctive ringing - Stability improvements: fixed several issues that would previously result in crashes - Accessibility improvements: fixes for issues related to accessibility helpers including screen readers and improved behavior when using external keyboards - Numerous bug fixes	

Previous iOS Release – May 9, 2023 V3.11 Software Update V3.11.00 SU30

	Summary	Description
1.	Rare crash on MaX UC iOS while indexing contacts.	In rare circumstances, MaX UC for iOS can crash while indexing contacts.

Previous Android Release – July 10, 2025 V3.21.27 build 1534

	Summary of Updates in this Release	
1.	Security improvement related to an SSL certificate issue.	

Previous Android Release – July 8, 2024 V3.21.00 SU17

	Summary	Description
1.	Voicemail tutorial screen not shown unless transcription is configured.	On MaX UC on Android, the Voicemail screen on the tutorial pages is not shown unless voicemail transcription is enabled in addition to voicemail.
2.	Navigating back from Terms and Conditions screen can result in being unable to login.	On MaX UC on Android, if a user navigates back from the Terms and Conditions screen instead of accepting them on first login, they can get stuck unable to access the login screen again.
3.	Messages may arrive out of order.	On MaX UC on Android, if the Android app is logged out but another device (e.g. Desktop) is logged in, Instant Messages received during this period can display out of order when the Android device is logged back in.
